

Elastorapid

Two-component, highly deformable, high performance cementitious adhesive, fast-setting and hydrating, with extended open time and no vertical slip for ceramic tiles and stone material

CLASSIFICATION ACCORDING TO EN 12004
Elastorapid is a highly deformable (S2), improved (2), fast-setting (F) cementitious (C) adhesive, slip-resistant (T) and with extended open time (E), of class C2FTE S2.

Elastorapid is CE approved, as declared in ITT certificate No. 25070277/Gi (TUM) and No. 25080024/Gi (TUM) issued by the Technische Universität München laboratory (Germany).

WHERE TO USE

Bonding to internal and external walls and floors of all types and sizes of ceramic tiles (single-fired, double-fired, porcelain, clinker, terracotta, etc.), natural stone (marble, granite, etc.) and artificial materials which are slightly sensitive to humidity (class B MAPEI dimensional stability standard) which require the use of a fast-drying adhesive.

Some application examples

- Laying ceramic and stone floor coverings which are subject to intense traffic.
- Quick repair operations where the floor needs to be put into service immediately (public buildings, motorway service areas, supermarkets, airports, pedestrian areas), even during hot weather. Compared with other fast-setting adhesives, the longer pot-life of **Elastorapid** makes it more easy to apply even during hot weather.
- Laying tiles on deformable substrates: marine plywood, wooden agglomerates (if sufficiently stable to water), old wooden floors, etc.

- Quick laying or repair of tiled finishes in places such as swimming pools, refrigeration cells, industrial plants (breweries, wine cellars, dairies etc.).
- Laying even large-sized ceramic and stone tiles on façades, balconies, terraces, and sun-roofs and patios which are subject to direct sunlight and thermal gradients.
- Laying tiles in areas subject to high mechanical stresses and vibration (railway underpasses, underground railway platforms, etc.).
- Laying tiles on concrete substrates and pre-cast walls.
- Laying large-sized tiles on heated screeds or on top of existing floor coverings in ceramic, terrazzo, marble, etc.
- Laying tiles on surfaces waterproofed with **Mapelastic** or **Mapegum WPS**.
- Laying stone material which is sensitive to stains (White Carrara, etc.).

TECHNICAL CHARACTERISTICS

Elastorapid is a two-component adhesive available in grey or white consisting of a special binder and selected silica sand (comp. A) and a synthetic latex rubber (comp. B).

When the two components are mixed together, a mortar with the following characteristics is obtained:

- low viscosity, therefore easy to apply;

Elastorapid

Spreading Elastorapid on a cementitious screed with a notched trowel

Laying porcelain tiles on a screed waterproofed with Mapelastic

Laying porcelain tiles on a marine plywood substrate with Elastorapid

- highly thixotropic: **Elastorapid** may be applied on vertical surfaces without sagging, and even large-sized, heavy tiles do not slip. Tiles may be laid starting from the top of the surface without using spacers;
- the pot-life of the mix is particularly long compared with other fast-setting adhesives, making the laying operation easier even during the summer at high temperatures;
- good capacity for accommodating deformation of the substrate and tiles (chipboard, marine plywood, concrete, etc.);
- perfect bonding to all materials normally used in building;
- thicknesses of up to 10 mm set without shrinkage and without a reduction in thickness, until a considerably high mechanical strength is reached.

Elastorapid has high bonding strength after only 2-3 hours and, therefore, floor and wall coverings may be put into service very quickly.

RECOMMENDATIONS

Do not use **Elastorapid**:

- on metallic, rubber, PVC or linoleum surfaces;
- with marble or artificial materials which are subject to high levels of moisture movement (green marble, some types of slate and sandstone in the class C MAPEI dimensional stability standard). In this case, use **Keralastic**, **Keralastic T** or **Kerapoxy**.

Do not add water or component B to the mixture that has begun to set.

APPLICATION PROCEDURE

Preparing the substrate

The substrates must be flat, stable, mechanically strong, sufficiently dry and free from loose or crumbly parts, grease, oil, paint, and wax, etc. Damp substrates may slow down the setting of **Elastorapid**. Cementitious substrates must not be subject to shrinkage after laying the tiles and therefore, during good weather, the substrates must be cured for at least 1 week per centimetre of thickness. Cementitious screeds must be cured for at least 28 days, unless they are made using a MAPEI special binder for screeds such as **Mapcem**, **Mapcem Pronto**, **Topcem** or **Topcem Pronto**.

Dampen with water to cool down surfaces which are too hot due to exposure to direct sunlight.

Gypsum substrates and anhydrite screeds must be perfectly dry (max. residual moisture 0.5%), sufficiently hard and free of dust. They must be treated with **Primer G**, **Mapeprim SP** or **Mapeprim 1K**, while areas subject to high humidity must be treated with **Primer S**.

Preparing of the mix

Mix 25 kg of grey or white component A (cementitious powder) with 6.25 kg of component B (synthetic latex rubber). It is best to use a low-speed mechanical mixer to obtain a smooth, homogenous paste by pouring the powder (component A) into the latex (component B).

The pot life is approximately 60-75 minutes at

+20°C, but higher temperatures may reduce this time considerably. Compared to other fast-setting adhesives, however, the longer open time of **Elastorapid** means that it is easier to lay tiles even during hot weather.

Applying the mix

Apply **Elastorapid** on the substrate with a notched trowel. Use a trowel which guarantees that the adhesive is spread well on the back of the tile.

To achieve a good bond, first spread a thin layer of **Elastorapid** on the substrate using the smooth side of the trowel, and then immediately apply another layer to the thickness required with a notched trowel according to the type and size of the tile. For pieces of mosaic up to 5x5 cm, use a MAPEI No. 4 or 5 trowel (consumption 2.5-3 kg/m²).

For normal ceramic coverings, a MAPEI No. 5 trowel with a rhomboid notch is recommended (consumption 3.5-4 kg/m²). For uneven floors or surfaces or tiles with a ribbed back, a MAPEI No. 6 trowel with a rhomboid notch is recommended (consumption 5-6 kg/m²).

For very uneven surfaces or with large tiles and tiles with large ribs on the back, a MAPEI No. 10 trowel with a square notch is recommended (consumption 8 kg/m²) or a trowel used for **Kerapox** (up to 1 cm thickness).

For laying ceramic or natural stone on floors externally, tiles with a dovetail or knobbed back, tiles larger than 900 cm², floor coverings to be polished on site or subject to heavy loads or for swimming pools and water basins, spread the adhesive also on the back of the tile to guarantee full contact.

Laying the tiles

It is not necessary to wet the tiles before laying them. Only when the backs are very dusty it is advisable to dip the tiles in clean water.

The tiles must be laid by pressing them down firmly to ensure a good contact with the adhesive.

Under normal climatic conditions, the open time of **Elastorapid** is approximately 30 minutes. Under unfavourable weather conditions (strong, direct sunlight, wind, high temperature and low R.H.), or if the substrate is very absorbent, the open time may be reduced to only a few minutes.

Wetting the substrate before applying the adhesive helps to increase the open time.

Check constantly to make sure that the adhesive does not form a surface skin and that it is still fresh. If a surface skin forms, re-spread the adhesive with a notched trowel. Do not wet the adhesive if a surface skin forms. Instead of dissolving the skin, a non-adhesive skin will form.

Surfaces tiled with **Elastorapid** must not be washed down or exposed to rain for at least 3-4 hours and must be protected from strong, direct sunlight for at least 12 hours.

GROUTING AND SEALING

The joints between the tiles may be grouted after 3 hours with a suitable MAPEI cementitious or epoxy grout, which is available in a variety of colours.

Expansion joints must be sealed with a suitable MAPEI sealant.

TECHNICAL DATA (typical values)

In compliance with the norms:

- EN 12004, such as C2FTE S2
- ANSI A 118.4 - 1999 (USA)
- 71 GP 30 M type 2 (Canada)

PRODUCT IDENTITY

COMPONENT A:

| | |
|---|---|
| Consistency: | grey or white powder |
| Bulk density (kg/m³): | 1,250 |
| Dry solids content (%): | 100 |
| Storage: | 12 months in original packaging in a dry place |
| Hazard classification according to 1999/45/EC: | none. Before using refer to the "Safety Instructions for the preparation and application" paragraph and the information on the packing and safety data sheet |

COMPONENT B:

| | |
|---|---|
| Consistency: | liquid |
| Colour: | white |
| Density (g/cm³): | 1,035 |
| pH: | 6.5-7.5 |
| Dry solids content (%): | 30.5-32.5 |
| Storage: | 24 months in original, closed packaging. Protect from frost |
| Hazard classification according to 99/45/EC: | none. Before using refer to the "Safety Instructions for preparation and application" paragraph and the information on the packing and safety data sheet |
| Customs class: | 3824 50 90 |

COMPOSITION AND PROPERTIES OF THE MIXTURE (at +23°C and 50% R.H.)

| | |
|---|---|
| Mixing ratio: | white: component A: 25 kg + part B: 6.25 kg grey: component B: 25 kg + part B: 6.25 kg |
| Consistency of mix: | thick paste |
| Density of mix (kg/m³): | 1,650 |
| pH of mix: | approx. 11 |
| Application temperature range: | from +5°C to +30°C |
| Pot life: | 60-75 minutes |
| Open time (according to EN 1346): | 30 minutes |
| Setting time: | 120-150 minutes |
| Time to grouting: | after 3 hours |
| Set to light foot traffic: | after 3-4 hours |
| Ready for use: | after 24 hours (3 days for swimming pools and basins) |

FINAL PERFORMANCES

| | |
|--|------------------------|
| Bonding strength according to EN 1348 (N/mm²): | |
| - initial (after 28 days): | 2.5 |
| - after heat ageing: | 2.5 |
| - after immersion in water: | 1.5 |
| - after freeze/thaw cycles: | 1.8 |
| Flexural strength (N/mm²) | |
| - after 28 days: | 6.0-7.0 |
| Compressive strength (N/mm²) | |
| - after 28 days: | 17.0-18.0 |
| Resistance to acids: | poor |
| Resistance to alkalis: | excellent |
| Resistance to oil: | excellent |
| Resistance to solvents: | excellent |
| Service temperature range: | from -30°C to +90°C |
| Deformability according to EN 12002: | S2 - highly deformable |

Laying large-sized porcelain tiles on a concrete façade with Elastorapid

POLISHING

The surfaces may be polished after 24 hours.

SET TO LIGHT FOOT TRAFFIC

Floors are set to light foot traffic after 3-4 hours.

READY FOR USE

The surfaces are ready for use after approximately 24 hours. Basins and swimming pools can be filled after 3 days.

Cleaning

Tools may be cleaned with clean water before the adhesive sets. Once set, cleaning becomes very difficult, but the use of a solvent such as white spirits or a similar product usually helps.

CONSUMPTION

- Mosaics and small-sized tiles (trowel No. 4): 2.5-3 kg/m²;
- normal-sized tiles (trowel No. 5): 3.5-4 kg/m²;
- large tiles and external floors (trowel No. 6): 5-6 kg/m²;
- uneven back faces and substrates, natural stone (trowel No. 10): 8 kg/m² or more.

PACKAGING

Elastorapid is available in either a white or grey colour.

Elastorapid white: 31.25 kg kit, comprising: component A: 25 kg bag; component B: 6.25 kg drum.

Elastorapid grey: 31.25 kg kit, comprising: component A: 25 kg bag; component B: 6.25 kg drum.

STORAGE

Elastorapid component A may be stored for up to 12 months in its original packaging in a dry place.

Manufactured in compliance with the regulations of the 2003/53/EC Directive.

Elastorapid component B may be stored for up to 24 months. Protect from frost.

SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION

Elastorapid component A contains cement which, in contact with sweat or other body fluids, produces an irritating alkaline reaction. Use protective gloves and goggles. The safety data sheet is available upon request.

PRODUCT FOR PROFESSIONAL USE.

WARNING

While the indications and guidelines contained in this data sheet correspond to the company's knowledge and wide experience, they must be considered, under all circumstances, merely as an indication and subject to confirmation only after long-term, practical applications. Therefore, anybody who undertakes to use this product, must ensure beforehand that it is suitable for the intended application and, in all cases, the user is to be held responsible for any consequences deriving from its use.
